SUMMARY

Developer with a background in Mathematics and hands-on experience in full-stack programming, machine learning, and performance optimization. Recently built [StarwSync](#), a cross-platform web application leveraging the Spotify API, data-driven algorithms, and a dynamic UI. Fast, adaptive learner with strong problem solving skills acquired through a diverse range of challenges.

EDUCATION

Bachelor of Science – Mathematics

University of British Columbia, Vancouver, BC

Graduated: May 2025

GPA: 3.20

Relevant coursework: Data Structures, Software Construction, Applied Machine Learning, Linear Programming, Linear Algebra, Data Analysis

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C, C++, R, HTML, CSS, VBA

Frontend: React, Tailwind CSS

Backend: Node.js, Express, Axios, CORS

Tools/DevOps: Git, JUnit, GDB

Libraries/Frameworks: numPy, Pandas, scikit-learn, NEAT

WORK EXPERIENCE

Data Analyst Co-op

Jan 2024 – Aug 2024

Conetec Investigations - Vancouver BC

- Assisted on multiple projects simultaneously by providing timely support, ensuring tasks were completed with meticulous attention to detail
- Proactively took on additional responsibilities by learning and developing VBA macros for Excel, significantly improving workflow efficiency for the rest of the team

TECHNICAL EXPERIENCE

StarSync | React, Node.js, Tailwind, Git

May 2025

- Developed a modern, cross-platform, full-stack web application that displays music statistics and generates user insights by utilizing the Spotify API.
- Built the system from the bottom up, using Node/Express for the backend, React/Tailwind for a dynamic frontend, and Axios/CORS to manage secure, asynchronous communication.
- Deployed with Render and configured routing, redirect behaviour, and build functions to support both local and online environment

Particle Collision Physics Engine | C++, Git, SFML

Jan 2024

- Employed C++ and SFML to simulate particle collision.
- Utilized Git version control system to manage code branches and collaborate in an efficient manner.
- Focused on code optimization to allow for a larger scale simulation (1500+ objects)
